The global Online Continuous Emulsifying Disperser market size is predicted to grow from US$ 73.98 million in 2025 to US$ 101 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

The online continuous emulsifying and dispersing machine is a mechanical equipment specially designed for online and continuous material processing to achieve emulsification, dispersion, homogenization and other functions. It is usually equipped with a special stator and rotor, which generates strong shear force and centrifugal force through high-speed rotation, thereby achieving fine processing of materials. The working principle of this equipment is mainly based on the comprehensive forces of shear, extrusion, friction and impact of materials between special stators and rotors. After the material is evenly sucked into the working chamber, it will be strongly thrown into the narrow and precise gap between the stator and rotor in the fast-flowing liquid. In this process, the material will be subjected to strong shear force and centrifugal force, thereby achieving emulsification, dispersion and homogenization.

United States market for Online Continuous Emulsifying Disperser is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
