Online double conversion UPS (Uninterruptible Power Supply, uninterruptible power supply system) is a high-reliability power protection device. Regardless of whether the voltage is normal, the AC voltage used by the load must pass through the inverter circuit device. That is, the inverter circuit is always in working condition, ensuring that the power supply of the load is not affected by fluctuations or interruptions in the mains power. The online double conversion UPS first converts the input alternating current (AC) into direct current (DC) through a rectifier, stores it in the battery, and powers the inverter at the same time. The inverter then converts the DC into high-quality sinusoidal AC and outputs it to the load. When the mains power is interrupted, the battery will immediately discharge to the inverter to ensure uninterrupted power supply to the load. Since the load is always powered by the inverter and the inverter is always in working condition, the online double conversion UPS can provide almost zero interruption power supply. When the mains power returns to normal, the online double conversion UPS can automatically switch from battery power mode back to mains power mode without manual intervention.

The global Online Double Conversion UPS market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
