The online dual-track dispensing machine is a precision device that is installed on an automated production line and uses a dual-track parallel design to achieve efficient fluid dispensing operations. Its core feature is that the dual transmission tracks can operate independently or collaboratively, and combined with the XYZ three-axis motion system and precision injection valve, it can simultaneously perform high-precision dispensing on two workpieces. The equipment drives the piston through compressed air to press the colloid material out of the needle port. The amount of dispensing is precisely controlled by the piston stroke. It supports a variety of fluids such as UV glue and hot melt glue, and is equipped with laser height measurement, visual positioning and other modules to achieve ± 0.01 mm positioning accuracy and dynamic glue volume compensation.
