The global Online Isopropanol Detection Alarm market size is predicted to grow from US$ 84.13 million in 2025 to US$ 146 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

The online isopropanol detector and alarm is a safety monitoring device used to monitor the concentration of isopropanol in the air in real time and issue an audible and visual alarm when the concentration exceeds the standard. It is commonly used in chemical, electronics manufacturing, pharmaceutical, spraying, and warehousing environments where flammable and explosive gases are present. This device continuously collects air samples through a high-sensitivity gas sensor (such as catalytic combustion, electrochemical, or infrared optical type) and transmits the detection data to a monitoring system in real time, enabling concentration display, data recording, and remote linkage control. When the isopropanol concentration exceeds a set threshold, the system automatically triggers an alarm or activates safety measures such as ventilation and power cut-off, effectively preventing fires and poisoning accidents and ensuring production and personnel safety. In 2024, sales reached 259,000 units, with an average price of $305 per unit. Single-line production capacity was 40,000 units, with a gross profit margin of 36%.
