On-Line Partial discharge monitoring systems can be used for surveillance of insulation systems on GIS, transformers, rotating machines, motors, cables, or other high voltage equipment. These instruments are designed for long term data recording, alarm handling, event recognition, and system integration. The Partial Discharge Monitoring Systems industry can be broken down into several segments, Permanent Monitoring System, Temporary Monitoring System.

Equipment Reliability: Partial discharge (PD) is an early indicator of insulation degradation in high-voltage electrical equipment. Online PD monitoring systems help identify potential faults and prevent unplanned downtime.

Preventive Maintenance: Online PD monitoring enables condition-based maintenance, allowing operators to address issues before they escalate, leading to cost savings and improved system reliability.

Cost of Implementation: High-quality online PD monitoring systems can have a significant upfront cost, especially for larger installations, which might be a barrier for some organizations.

Interference and Noise: Electrical noise and interference can affect the accuracy of online PD measurements, requiring measures to mitigate their impact.
