An Online Trace Impurity Analyzer, also known as an Online Trace Impurity Detection System, is an analytical instrument used in various industries to continuously monitor and detect very low concentrations of impurities or contaminants in a liquid or gas stream. These impurities can be undesirable substances that may affect product quality, safety, or compliance with regulatory standards. Online Trace Impurity Analyzers are critical for ensuring the quality and purity of products in industries such as pharmaceuticals, chemicals, environmental monitoring, and semiconductor manufacturing.

Ongoing efforts were being made to improve the sensitivity of impurity analyzers, allowing them to detect impurities at even lower concentrations (sub-ppb levels) to meet stringent quality requirements.
