Online transformerless UPS is a device that provides power in the event of a power outage, and its main feature is that it does not require an external transformer. This type of UPS typically adopts a dual converter design, where the power supply is first transformed through a converter and then transformed through an inverter. The device converts electricity into alternating current and outputs it to the load. Due to the absence of an external transformer, this type of UPS has a relatively small volume and higher efficiency, making it suitable for situations that require high space and efficiency.
