The global Online Vibrating Gas Density Meter market size is predicted to grow from US$ 127 million in 2025 to US$ 162 million in 2031; it is expected to grow at a CAGR of 4.2% from 2025 to 2031.

The online vibrating gas density meter is an instrument specially designed to measure the density of gas continuously and in real time during industrial production processes. The online vibrating gas density meter works based on the principle of vibration. Its core component is a sensor (also called a vibrator) that can maintain natural frequency vibration. When the gas flows through the sensor, it contacts the vibrating wall and changes its vibration mass as the cylinder vibrates. Due to the different density of the gas, the impact on the vibrator is also different, resulting in a change in the vibration frequency. By measuring this frequency change, the density of the gas can be accurately determined.
