Onsite electro-chlorination systems are technologies used to produce chlorine or chlorine-based disinfectants directly at a facility using an electrochemical process. This process involves passing an electric current through a saltwater solution (brine) to generate chlorine gas, which can then be used for water treatment, disinfection, or sanitation. These systems are often employed to provide a safe and convenient source of chlorine without the need to transport or store hazardous chlorine chemicals.

The global Onsite Electro-Chlorination Systems market size is projected to grow from US\$ 345 million in 2024 to US\$ 486 million in 2030; it is expected to grow at a CAGR of 5.9% from 2024 to 2030.
