The global Open Channel Ultrasonic Flowmeter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

An open channel ultrasonic flowmeter is a non-invasive device used to measure the flow rate of liquids in open channels, such as rivers, canals, or wastewater treatment systems. It operates by emitting ultrasonic pulses across the flow and measuring the time it takes for the signals to reflect back from the surface of the liquid. This data is used to calculate flow velocity and, combined with the channel's cross-sectional area, determines the volumetric flow rate. These flowmeters are highly accurate, require minimal maintenance, and are ideal for monitoring flow in environments where traditional flow measurement methods may be difficult or impractical. They are widely used in environmental monitoring, water management, and industrial applications.
