## Abstracts

The global Open Laser Cutting Machine market size is predicted to grow from US$ 3319 million in 2025 to US$ 5113 million in 2031; it is expected to grow at a CAGR of 7.5% from 2025 to 2031.

An open laser cutting machine is an industrial processing equipment with an open structure design. Its core feature is that it omits the fully enclosed protective cover of traditional equipment, exposing the processing area directly to the operating environment. This design significantly improves the operational flexibility, facilitates manual observation of the cutting process, real-time adjustment of material positions, or positioning of complex workpieces, and is particularly suitable for small batch, multi-variety or customized processing needs. The equipment is usually equipped with a fiber laser or a CO2 laser, and can process a variety of materials such as stainless steel, aluminum alloy, acrylic, wood, leather, etc., with a power range from tens of watts to several kilowatts. Its advantages include low cost, easy maintenance, excellent heat dissipation performance, and compatibility with large-format or special-shaped workpiece processing. It is widely used in advertising production, architectural decoration, educational experiments, creative design and other fields.

United States market for Open Laser Cutting Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
