Open net abrasives are a type of high-performance flexible abrasive with an open fiber mesh structure. The sand particles are evenly bonded to the mesh substrate via resin, enabling efficient dust removal, wear resistance, and anti-clogging during the grinding process. They are commonly used in applications such as wood sanding, car refinishing, metal polishing, and coating. Compared to traditional sandpaper, open net abrasives offer higher processing efficiency, longer lifespan, and can be used in conjunction with vacuum systems to significantly reduce dust pollution. Their upstream supply relies on the production and supply of abrasive particles (such as aluminum oxide and silicon carbide), fiber mesh substrates, and resin binders. Their downstream applications are widely used in furniture manufacturing, car refinishing, architectural decoration, metal processing, and home DIY markets.
