Open-pit mining autonomous driving solutions consist of an integrated product matrix including an intelligent cloud control platform, vehicle-mounted autonomous driving system, drive-by-wire platform, and collaborative operation system. The intelligent cloud control platform serves as the core scheduling hub, providing global dynamic dispatch and deep multi-source data analysis through intelligent scheduling, map management, and data management functions. The vehicle-mounted autonomous driving system ensures single-machine intelligence with capabilities such as platooning and autonomous obstacle avoidance, capable of handling complex mining environments. The drive-by-wire platform implements electronic chassis modification through modular design, supporting multiple powertrain configurations and rapid functional iteration. The collaborative operation system connects auxiliary equipment, enabling efficient coordination of unmanned mining trucks and other devices through collaborative terminals and roadside units, improving overall operational efficiency and safety. Upstream components include high-performance computing platforms, LiDAR, high-definition cameras, inertial measurement units, industrial communication networks, and modular electronic chassis control systems. Downstream customers primarily include open-pit mine operators, mining equipment manufacturers, and mine engineering contractors. The overall industry gross margin in 2025 is approximately 25%?35%, reflecting the high added value and technical barriers of core intelligent control systems and collaborative operation modules.
