The global Open Storage Systems (OSS) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Open storage systems are storage solutions that are based on open source technologies and standards, rather than proprietary software and hardware. These systems offer more flexibility, interoperability, and cost-effectiveness compared to traditional proprietary storage systems. Open storage systems typically use standard hardware components such as disk drives, network adapters, and controllers, combined with open source software such as Linux, Apache, and various file systems to create a reliable and scalable storage infrastructure. This approach allows users to avoid vendor lock-in, customize their storage environments, and reduce costs by using commodity hardware. Open storage systems have gained popularity in recent years due to the increasing demand for scalable and cost-effective storage solutions in cloud computing, big data, and other data-intensive applications.
