Abstracts

The global Open Robot Leasing Platform market size is predicted to grow from US\$ 138 million in 2025 to US\$ 322 million in 2032; it is expected to grow at a CAGR of 13.0% from 2026 to 2032.

A Open Robot Leasing Platform is a digital transaction and service platform that aggregates robot equipment, rental companies, user demand, and service support. It rents robots to businesses or individuals on a short-term, per-use, or per-scenario basis through a platform channel, rather than directly selling hardware assets. The platform is responsible for order matching, equipment scheduling, transaction settlement, operation and maintenance support, and insurance services. In 2025, the global Open Robot Leasing Platform gross margin was approximately 20%–35%.

Against the backdrop of the accelerated development of embodied intelligence and humanoid robots, the industry is facing a common bottleneck: while technological capabilities continue to break through, the cost of application implementation is high, service chains are complex, and scenarios are severely fragmented, making it difficult for robot products to enter the commercial and public service systems on a large scale. Robot rental platforms emerged in this context. Through an innovative model of 'shared rental + platform-based scheduling,' the originally high-barrier, high-priced robot products are transformed into on-demand, standardized service capabilities. Robots are no longer one-off devices, but rather 'production factors' that can be flexibly deployed, rapidly mobilized, and paid for based on results. By connecting supply, organizing services, and amplifying demand, the platform is building a service network covering multiple participants, rather than simply facilitating transactions.
