According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment. Common operating tables are widely used in hospitals to help surgeons perform complex procedures more efficiently by improving accessibility, stability and support. The device provides surgical versatility and allows the integration of advanced surgical accessories to suit different procedures. Technological advancements such as 3D printing and electrification have allowed the development of common operating tables with exceptional functionality. In July 2022, researchers at Michigan Technological University and Western University developed a 3D printed operating table. The device can be used in general surgery and orthopedic surgery. Increase in the number of surgical procedures performed in hospitals due to rising severity of chronic diseases will accelerate the product demand. For example, British Columbia (BC) reported more than 337,000 procedures performed between March 2021 and 2022, the highest number of procedures performed in a 12-month period. Increasing inclination toward hospitalization due to access to innovative and quality surgical and postoperative care will positively impact the industry outlook. The development prospect of the operating table will drive the market growth of supporting restraint belt consumables.
