We define the operations intelligence platform as a suite of development and runtime software tools that monitor, alert and support interactive decision making by providing data and analytics about current conditions. These platforms have adapters to receive and send data; event processing logic to detect threats and opportunities; rule processing; analytics; dashboards; alerting facilities; and capabilities to trigger responses in applications, devices or workflow tools. The platforms apply to the operational aspects of a business. Business operations are activities that produce, deliver or directly enable goods, services and information products. Applications built on operations intelligence platforms work at the oversight level; they do not directly control work at a detailed level.
