The Operative Fiber Laser Knife is a medical tool specifically designed for surgical procedures, particularly in minimally invasive surgeries. It utilizes a fiber laser technology to precisely cut or coagulate tissues during the operation. The laser emits a concentrated beam of light through a flexible fiber optic cable, which is controlled by the surgeon. The laser beam interacts with the tissue, vaporizing or sealing it, reducing bleeding and promoting faster healing. The fiber optic nature of the knife allows for better maneuverability in hard-to-reach areas and enables precise and controlled incisions, making it a valuable tool for delicate and complex surgeries.

The industry trend of the Operative Fiber Laser Knife is focused on advancing its technological capabilities and enhancing its versatility. Manufacturers are constantly

striving to improve the power, precision, and safety features of the laser knife. One notable trend is the development of more compact and portable devices, enabling easier integration into different surgical settings. Additionally, the industry is investing in research and development to expand the range of applications, allowing the laser knife to be used in various specialties and procedures. Advancements such as improved tissue interaction, wavelength options, and real-time feedback systems are also being explored to further optimize surgical outcomes and minimize patient trauma.
