Optometrists and ophthalmologists work in an environment where multiple pieces of equipment are routinely used for the diagnosis and treatment of a single patient. For example, to test for the presence of glaucoma, a patient may be assessed with optical coherence tomography (OCT), fundus imagery, perimetry, and some form of tonometer for measurements of intraocular pressure (IOP). Ophthalmic data management systems are diagnostic information and patient profile solutions that allow the practitioner to store, access, and review information in an efficient and clinically meaningful way.
