The global Ophthalmic Imaging Device market size is predicted to grow from US\$ 2538 million in 2025 to US\$ 4054 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Ophthalmic imaging is a highly specialised field of ophthalmology which helps doctors to diagnose and manage a wide variety of eye conditions.

The ophthalmic imaging device market is primarily driven by technological advancements in medical imaging and the growing prevalence of eye-related disorders worldwide. These imaging devices, such as Optical Coherence Tomography (OCT) and fundus cameras, enable early detection, accurate diagnosis, and effective monitoring of various eye conditions, including glaucoma, cataracts, and age-related macular degeneration. The rising elderly population also contributes to the increased demand for ophthalmic imaging devices, as age is a significant risk factor for many eye diseases. However, the market faces challenges such as the high cost of these advanced devices, which may limit accessibility, especially in low-resource settings. Additionally, integrating and managing the vast amount of imaging data generated by these devices pose challenges for healthcare providers. Overcoming these barriers and focusing on affordability and streamlined data management will be crucial in driving the widespread adoption of ophthalmic imaging devices and improving eye care outcomes globally.
