The Production is about 450,000 units. An Ophthalmic Lathe Machine is a high-precision manufacturing system used to produce contact lenses, intraocular lenses (IOLs), and other ophthalmic optical components. These systems employ ultra-precise lathe turning, often with diamond-cutting technology, to shape complex optical surfaces, including spherical, aspheric, and freeform designs. They ensure superior surface quality and accuracy, critical for achieving optimal vision correction and comfort. Leading manufacturers integrate advanced CNC control, automation, and real-time measurement to enhance efficiency and consistency in lens production.

Freeform & Personalization

Advanced freeform capabilities enable highly customized lenses based on individual eye parameters, improving visual comfort.

Ultra-Precision & Surface Quality

Development toward nanometer-level precision reduces polishing needs and enhances optical performance.

Automation & Lights-out Manufacturing

Integration of robotics, automated inspection, and closed-loop control enables low-labor or unmanned production.

High-Speed & Throughput

Faster spindle speeds and tool efficiency shorten cycle times, supporting mass customization.

Digitalization & System Integration

Integration with Rx data, design software, and MES enables end-to-end digital workflows and traceability.

Multi-Material Compatibility

Supports resin, polycarbonate, high-index materials, and advanced coatings for flexible manufacturing.

Compact & In-store Processing

Smaller, modular systems enable in-store labs, reducing delivery time.
