Ophthalmic Steroids Drugs refer to the steroids drug for the Ophthalmic. A large class of important natural compounds are derived from steroids with a tetracyclic structure. These compounds are called steroids and they are found in all plants and animals. The most abundant steroid in animals is cholesterol C₂₇H₄₆O. The body can synthesize cholesterol, and it can easily absorb cholesterol from food through the intestinal wall. Cholesterol is related to the formation of gallstones, which also harden the arteries. Biochemical changes and degradation of cholesterol produce many steroids that are important in human biochemistry.
