OPO-containing infant formulas are specialized formulas enriched with structured triglycerides, predominantly 1,3-dioleoyl-2-palmitoylglycerol (OPO), designed to mimic the fat structure of human breast milk. OPO enhances the bioavailability of palmitic acid in a way that promotes better fat and calcium absorption, reducing the risk of constipation and improving stool consistency in infants. Key features include a balanced lipid profile, enhanced digestibility, and a role in supporting gut health by fostering beneficial microbiota. These formulas are particularly beneficial for infants who cannot be breastfed, offering improved energy utilization, growth support, and comfort in digestion, making them suitable for addressing feeding issues and ensuring optimal nutrient uptake.
