The global Optic Fiber Coil for Gyroscope market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

An optical fiber coil is a key component used in fiber optic gyroscopes (FOGs), which are devices used for measuring rotation or angular velocity. Fiber optic gyroscopes are based on the principles of the Sagnac effect, which involves the interference of light waves as they travel through a coil of optical fiber. This interference is used to detect any changes in the angular velocity of the coil, allowing the gyroscope to measure rotations accurately.

Fiber optic gyroscopes have advantages over traditional mechanical gyroscopes, such as their lack of moving parts, higher accuracy, and resistance to external factors like vibration. They are widely used in applications where accurate navigation, stabilization, and orientation sensing are essential.
