The global Optical-Based Turbidity Sensor market size is predicted to grow from US$ 697 million in 2025 to US$ 935 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

An Optical-Based Turbidity Sensor is a device that uses optical principles to measure the turbidity, or degree of cloudiness or haziness, of a liquid. Turbidity is typically caused by the presence of suspended particles, such as dirt, clay, algae, or other substances, in the liquid. The sensor works by emitting a light beam into the liquid and then measuring the amount of light that is scattered or absorbed by the particles present. The more particles there are in the liquid, the more light will be scattered, resulting in a higher turbidity reading.

United States market for Optical-Based Turbidity Sensor is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Optical-Based Turbidity Sensor is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
