Optical Beam Combiner is a precision optical component designed to combine two or more light beams with different wavelengths, polarization states, or optical paths into a single output beam. It typically uses optical coatings, prisms, dichroic filters, fiber coupling structures, or free-space optical elements to achieve efficient beam integration while maintaining optical performance. The product is widely used in laser systems, optical communications, LiDAR, biomedical instruments, spectroscopy equipment, and industrial laser processing. The product boundary includes optical beam combining modules and components, excluding complete laser systems and general optical mirrors or lenses.

The optical beam combiner industry chain includes upstream suppliers of optical glass, crystals, coatings, optical fibers, precision machining materials, and optical processing equipment; the midstream sector covers optical design, coating, precision assembly, alignment, testing, and module manufacturing; the downstream sector includes laser
