Optical Beam Splitter is a precision optical component designed to divide or combine incident light beams according to a specified transmission and reflection ratio. It is manufactured using optical glass or fused silica with high-performance dielectric or metallic coatings to ensure stable optical performance, low loss, and high wavelength accuracy. Beam splitters are widely used in laser systems, optical communication, biomedical instruments, imaging equipment, semiconductor inspection, interferometers, and scientific research. The product boundary includes plate beam splitters, cube beam splitters, pellicle beam splitters, and polarization beam splitters, excluding optical mirrors and diffraction gratings.

The optical beam splitter industry chain includes upstream suppliers of optical glass, fused silica, coating materials, polishing consumables, and precision processing equipment; the midstream sector covers optical design, substrate processing, coating deposition, precision assembly, testing, and packaging; the downstream sector includes laser equipment, optical communication, medical imaging, semiconductor manufacturing, industrial inspection, defense optics, and scientific instruments.
