Optical coherence tomography (OCT), the most widely used optical medical imaging technology, can be used in the non-destructive testing (NDT) and inspection arena. Valued for its ability to provide non-contact imaging of surface morphology and subsurface structure with micron-level resolution, the technique can provide quantitative analysis of structure, features, and defects for a wide range of materials. It is also rapid; 3D images may be captured in within few seconds, or a cross-section can be monitored at faster than video rates for real-time manufacturing or process control feedback.
