Optical Curve Profile Grinding Machine is a high-precision and high-performance machine tool for grinding curved surfaces. It plays a great role in precision grinding. Form grinding on an optical curve grinder uses an optical projection amplification system to enlarge the image of the workpiece onto the screen, and compare it with the enlarged image of the workpiece clamped on the screen. During processing, the grinding wheel is used to grind the workpiece, and the workpiece will cross the drawing line. The remaining parts are rubbed away until the contours of the object are all coincident.

The global Optical Curve Profile Grinding Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
