The global Optical Display Fingerprint Sensors market size is predicted to grow from US\$ 2087 million in 2025 to US\$ 3039 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

The optical display fingerprint sensor is an advanced biometric technology integrated under the screen of smart devices, which can read the user's fingerprint information directly through the screen. This technology is mainly used in smartphones and tablets, realizing a seamless, beautiful and secure unlocking experience and payment authentication function. The sensor uses the self-luminous characteristics of the OLED screen. When the user presses the screen with his finger, the screen emits light to illuminate the fingerprint, and the reflected light is captured by the optical sensor below through the small holes in the screen substrate.
