An Optical Dissolved Oxygen Analyzer is an instrument used to measure the amount of dissolved oxygen in a liquid sample. It works by using an optical sensor that detects changes in fluorescence caused by the presence of oxygen. The analyzer typically consists of a probe that is inserted into the liquid and connected to an electronic control unit that displays the oxygen level. It also provides reliable and accurate results in real-

time, making it useful for a variety of applications such as in wastewater treatment plants, aquaculture, and environmental monitoring.
