The global Optical Dome market size is predicted to grow from US\$ 486 million in 2025 to US\$ 698 million in 2031; it is expected to grow at a CAGR of 6.2% from 2025 to 2031.

Optical domes are hemispheric windows which provide a protective boundary while allowing a clear field of view between two environments. They are typically made of two parallel surfaces. Optical domes are mostly used for protecting sensitive systems. For example, optical sensors for LIDAR built into airplanes must be protected with quite robust domes, withstanding the impact of sand or even birds at high velocities. Similarly, domes for submarines and underwater camera and video systems must withstand high pressures.

Optical material is a general term for materials with certain optical properties and functions used in optical experiments and optical instruments. At present, there are dozens of optical materials: colorless optical glass and tinted optical glass, infrared optical materials, optical crystals, optical quartz glass, artificial optical quartz crystals, microcrystalline glass, optical plastics, optical fibers, optical filters, aerospace plexiglass, opalescent diffuse glass, as well as related liquid materials. Among them, optical glass is most used in imaging components. As the modern optical industry and electronics industry, information technology and communications technology, close integration of optoelectronics technology, photonics technology and electronic industrial technology in the optical manufacturing applications break through the optical components and optical field of the traditional concepts, at present, aspherical, diffractive optical components, processed with ultra-high-precision thin-film technology WDM wavelength-division multiplexing devices, with a new generation of photolithography equipment for the manufacture of ultra-high-precision optical

components, etc. dominate the mainstream of new-generation optical components. In order to reduce costs and enhance competitiveness, the global optoelectronics-related industries have moved to mainland China. Among them, Japan's Canon, Olympus, Ricoh, Nikon, Minolta, Sony and other companies have digital cameras, LCD projectors and other products into the coastal areas of mainland China.
