The optical evaporation coating machine is one of the vacuum evaporation coating machines. Its principle is to use high-energy electrons to bombard the target material in the crucible, that is, the evaporation material, under vacuum conditions, through the cooperation of the electromagnetic field, to evaporate and gasify it, and then transport it to the substrate and send it to the substrate. A method of forming a thin film by condensation deposition on a substrate. Can be coated with various precision optical films, such as AR, AF, IR-CUT, NCVM non-conductive color film, metal film and other decorative films, functional films
