The global Optical Fiber Composite Cable market size is predicted to grow from US\$ 7814 million in 2025 to US\$ 17730 million in 2032; it is expected to grow at a CAGR of 12.7% from 2026 to 2032.

An optical fiber composite cable is a cable that combines optical fibers with electrical cables. They usually consist of multiple optical fibers and several cables and are used to carry optical and electrical signals in communication and data transmission applications.

Optical fiber composite cables are a key component in the global telecommunications and data transmission infrastructure. They are designed to provide both optical fiber and electrical power conductors within a single cable assembly. The global demand for high-speed data transmission and internet connectivity continues to drive the expansion of telecommunications networks. Optical fiber composite cables are a crucial part of this expansion, supporting high-bandwidth data transmission over long distances. The deployment of FTTH networks to deliver high-speed internet access to homes and the rollout of 5G mobile networks require extensive cabling infrastructure. Optical fiber composite cables play a vital role in connecting homes, cell towers, and data centers. The need for increased bandwidth and network capacity is pushing the demand for optical fiber composite cables with higher fiber counts. These cables are capable of accommodating more optical fibers, enabling higher data transfer rates. The growth of urban areas and the development of smart cities require advanced communication networks. Optical fiber composite cables are used to support the connectivity of various smart city components, such as traffic control systems, surveillance cameras, and IoT devices.
