The global Optical Glass market size is predicted to grow from US\$ 2043 million in 2025 to US\$ 2850 million in 2031; it is expected to grow at a CAGR of 5.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Optical glass is an inorganic amorphous material with specific optical properties. It is mainly used to control the propagation direction, intensity, dispersion and imaging quality of light. Compared with ordinary glass, optical glass has higher refractive index accuracy, dispersion control ability, optical uniformity and transmittance. Its refractive index (nd) and Abbe number (Vd) need to be strictly controlled within a very small deviation range. It is usually melted from high-purity oxides such as silicon, boron, barium, strontium, lead, and lanthanum, and is prepared through ultrasonic stirring, slow cooling annealing, precision testing and other processes. Optical glass is the core material for manufacturing optical components such as lenses, prisms, windows, filters, etc., and is widely used in optical instruments, consumer electronics, aerospace, medical imaging, laser systems and other fields.

The current optical glass market is showing a multi-dimensional evolution trend. With the rapid expansion of AR optics, smart driving, laser radar and other scenarios, high refractive index and low dispersion glass (such as LaK, ZLaF) is widely used in high-end lens modules, promoting the development of materials from traditional 'imaging optics' to the integration of 'perception + communication'. At the same time, stricter environmental regulations have led to the gradual replacement of traditional lead-containing materials with lead-free glass, becoming the mainstream choice in the world. From a regional perspective, Japan and Germany still control the dominance of high-

end formulas and processes, but Chinese manufacturers have rapidly risen in the mid-to-high-end market with their localized manufacturing advantages, large-scale production capacity and cost-effective strategies. Despite this, high-end optical glass is still highly dependent on imports. The fluctuation of rare earth prices, the growth of demand for compression molding and the pressure of green manufacturing have also posed higher technical and process challenges to local companies, and at the same time have bred key opportunities for breakthroughs in high-end and industrial chain autonomy. North America is the largest market, accounting for about 30% of the market share. Europe is second, accounting for about 27% of the market share. The main manufacturers include Schott, HOYA, CDGM Glass, Edmund Optics, Nikon, Crystran, Sumita Optical Glass, Sterling Precision Optics, CORNING, Precision Optical Inc., Hubei New Huaguang, Changchun Boxin Photoelectric Co., etc. The top three manufacturers account for about 21% of the market share.
