The global Optical Glass Molded Lens market size is predicted to grow from US\$ 465 million in 2025 to US\$ 847 million in 2032; it is expected to grow at a CAGR of 9.5% from 2026 to 2032.

In 2025, global production of Optical Glass Molded Lenses reached 250 million pieces, with an average selling price of USD 1.9 per piece, installed production capacity of 300 million pieces, and a gross margin of approximately 40%.

Optical Glass Molded Lenses are optical components manufactured by precision glass molding processes, in which optical glass is formed directly into the required optical surfaces and structures under controlled high-temperature conditions. These lenses typically feature aspherical geometries and enable high-volume production with consistent optical performance, making them widely used in imaging, sensing, and beam-shaping optical systems.

At a global level, the Optical Glass Molded Lens market is a mature yet steadily expanding segment of the precision optics industry. Demand is mainly driven by smartphone camera modules, automotive optical systems, security and surveillance, industrial vision, and selected medical optics applications. As end products increasingly require miniaturization, weight reduction, and higher imaging quality, the penetration of molded aspherical lenses continues to rise. The competitive landscape is led technologically by Japanese and European suppliers, while Asian manufacturers demonstrate strong cost advantages in mid-range products and large-scale production, resulting in a market characterized by both technology-driven differentiation and economies of scale.
