According to our LPI (LP Information) latest study, the global Optical Interconnect market size was valued at US$ 5297.5 million in 2023. With growing demand in downstream market, the Optical Interconnect is forecast to a readjusted size of US$ 14130 million by 2030 with a CAGR of 15.0% during review period.

The research report highlights the growth potential of the global Optical Interconnect market. Optical Interconnect are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Optical Interconnect. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Optical Interconnect market.

Optical interconnect is a means of communication by optical fiber cables.Compared to traditional cables, optical fibers are capable of a much higher bandwidth, from 10 Gbit/s up to 100 Gbit/s.

Electrical interconnects performance degrades at frequencies above 1 GHz due to ringing, increased signal latency, crosstalk and frequency dependent attenuation. These limitations of electrical interconnects will limit the maximum frequency of operation for future systems; Optical interconnect is seen as a potential solution since it can directly address these problems at the system level and meet the performance requirements of current and future generation of data processors, optical interconnects have negligible frequency dependent loss, low cross talk and high band width.
