Optical I/O Module is a high-speed optical interconnection component that enables data transmission between processors, accelerators, switches, and other computing devices by converting electrical signals into optical signals and vice versa. Designed for ultra-high bandwidth, low latency, and low power consumption, it supports next-generation AI computing, high-performance computing, cloud data centers, and advanced networking systems. The module typically integrates optical engines, driver ICs, photonic devices, connectors, and signal processing circuits. The product boundary includes pluggable and co-packaged optical I/O modules, excluding standalone optical chips, optical fibers, and complete networking equipment.

The optical I/O module industry chain includes upstream suppliers of photonic chips, laser devices, optical components, semiconductor wafers, substrates, electronic ICs, and packaging materials; the midstream sector covers optical engine integration, precision packaging, module assembly, testing, and calibration; the downstream sector includes AI servers, high-performance computing platforms, cloud data centers, network switches, and telecommunications infrastructure. Market growth is driven by increasing
