The optical line protection card is a line protection module used in optical transmission equipment (such as optical cross-connect equipment, WDM equipment or OTN system), which usually has 1+1, 1:1 or 1:N redundant switching capabilities. It determines the health status of the main line through the built-in optical power detection mechanism (such as real-time monitoring of received optical power RSSI), and automatically switches to the backup line within milliseconds when an abnormality occurs (such as fiber breakage, excessive optical attenuation).
