Optical nonlinear crystals are materials that exhibit nonlinear optical properties, meaning they respond to light in a nonlinear fashion. In linear materials, the relationship between the electric field of light and the induced polarization is linear, following Maxwell's equations. However, in nonlinear materials, this relationship becomes nonlinear, leading to effects such as frequency conversion, self-phase modulation, and optical parametric amplification.

The global Optical Nonlinear Crystals market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
