## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The optical parametric amplifier uses the parametric nonlinear interaction of the optical amplifier. The nonlinear crystal material without inversion symmetry has second-order nonlinearity. The second-order nonlinear process includes frequency doubling, sum frequency and difference frequency generation process, and Including the parameter amplification process. Parametric amplifiers are especially suitable for generating wavelengths that are not available for ordinary lasers or laser amplifiers due to the lack of suitable gain materials, or where a large tuning range is required and a high gain is achieved in a short distance.
