## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

An optical plate divider is an optical element whose structure behaves as a slab and is used to split incident light into two separate beams in a specified ratio. They have many advantages over cube beamsplitters. For example, flat-panel beamsplitters can operate at higher temperatures, withstand higher levels of laser power, and generally cost less than cube forms. Flat panel beamsplitters are also lighter and smaller for applications requiring minimal weight or limited available space.

The global market for Optical Plate Dividers is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Optical Plate Dividers market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
