Optical Signal Transmitter,a device that accepts an electrical signal as input, and converts it into optical signal. It uses to modulate an optoelectronic device. It generates an optical signal capable of being transmitted via an optical transmission medium.

Optical signal transmitters are widely used in fiber-optic communication systems to convert electrical signals into optical signals that can travel through optical fibers. Optical transmitters play a vital role in telecommunications networks, including internet, data, voice, and video transmission. Optical signal transmitters are essential in high-speed data centers, enabling fast and efficient data transmission over optical interconnects. Optical transmitters can also be used in wireless communication systems, where optical signals are used for backhaul and high-speed data transmission.
