The global Optical Strain Gauge market size is predicted to grow from US\$ 87.58 million in 2025 to US\$ 134 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

Optical strain gauge is a device used to measure the strain on the surface of an object. It uses optical effects to detect the deformation of the surface of the object. Optical strain gauges can be placed on the surface of objects that need to measure strain. When the object is deformed by external forces, it will cause the interference fringes on the optical strain gauge to change. By measuring the changes in the fringes, the surface strain of the object can be calculated. strain.
