## Abstracts

The global Optical Transfer Function Measuring Instruments market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Optical transfer function instrument (OTF Instrument) is a precision instrument used to measure the optical transfer function (OTF) of an optical system. OTF is an objective and effective indicator for evaluating the imaging quality of an optical system, and is widely used in the fields of optical system design, imaging quality evaluation and detection. The working principle of the optical transfer function instrument is usually based on the electronic scanning focal plane array detector and digital Fourier analysis. It uses a specific target object (such as a star point hole) as the measurement object, receives the image formed by the target object through an image receiving device such as a surface array charge coupled device (CCD), and pre-processes and analyzes the image through a computer to finally obtain the optical transfer function of the measured system. Optical transfer function measuring instruments are widely used in the detection of imaging lenses such as camera lenses, security lenses, and mobile phone lenses, as well as in the fields of optical system design, optical system imaging quality evaluation and detection. With the continuous development of computers, photoelectric detectors, and image acquisition and processing technology, optical transfer function measuring instruments are also constantly improving and perfecting to meet the measurement needs of higher accuracy and higher efficiency.

As an important part of the optical metrology instrument market, the development status and dynamics of the optical transfer function (OTF) measuring instrument market are jointly affected by multiple factors. Optical transfer function measuring instruments are widely used in scientific research experiments, industrial manufacturing,

communications, consumer electronics and other fields. In the manufacturing industry, it is crucial to evaluate the imaging quality of optical systems; in the aerospace field, it is used to accurately measure the performance of the optical system of aircraft; in the medical field, it also plays an important role, such as being used for imaging quality evaluation in ophthalmic surgery. Technological innovation is a key factor in promoting the development of the optical transfer function measuring instrument market. With the continuous development of cutting-edge technologies such as laser technology, optical sensing technology, and digital technology, the measurement accuracy and efficiency of optical transfer function measuring instruments have been significantly improved, meeting the needs of more industries for high-precision measurement. In summary, the optical transfer function measuring instrument market shows a good development trend of expanding market scale. In the future, the optical transfer function measuring instrument market is expected to continue to maintain a rapid development trend.
