Optoelectronic analog night vision devices are optoelectronic devices which produce an image quite similar to the one you see with your eyes, just with other colors. Night vision devices amplify the rest light in the night with the help of a photocathode and an image intensifier tube, so you get a brighter image for observing at night. These night vision devices operate in the visible and also near-infrared spectrum, while thermal devices operate only in the infrared spectrum.

The global Optoelectronic Analog Night Vision Devices market size is projected to grow from US\$ 4428.5 million in 2023 to US\$ 6397.1 million in 2030; it is expected to grow at a CAGR of 5.4% from 2024 to 2030.
