Abstracts

The global Oral Anti-inflammatory Drugs market size is predicted to grow from US$ 1988 million in 2025 to US$ 2657 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Oral anti-inflammatory drugs are a class of medications used to prevent, alleviate, or treat inflammatory diseases of the oral cavity and dentistry, primarily targeting gingivitis, periodontitis, oral ulcers, oral mucositis, pericoronitis of wisdom teeth, and post-dental surgery inflammation. These products work by inhibiting inflammatory responses, reducing redness, swelling, and pain, controlling local infection, or promoting mucosal repair. Common dosage forms include oral gels, ointments, sprays, mouthwashes, lozenges, patches, and oral tablets and capsules. Depending on their mechanism of action, products can encompass nonsteroidal anti-inflammatory drugs (NSAIDs), corticosteroids, antibacterial and anti-inflammatory drugs, topical anti-inflammatory agents, and compound preparations, and are widely used in hospital dentistry departments, specialized dental hospitals, dental clinics, retail pharmacies, and online pharmaceutical channels.

The oral anti-inflammatory drug market is expected to maintain stable growth in the future, primarily driven by factors such as the high global prevalence of oral diseases, an aging population, increased awareness of periodontal health management, higher penetration rates of dental treatments, and the upgrading of oral care consumption. As consumers increasingly prioritize the management of oral ulcers, bleeding gums, periodontitis, and postoperative inflammation, the demand for topical medications, OTC products, and convenient formulations is expected to expand further. Simultaneously, the expansion of dental chain institutions and the development of internet healthcare and pharmaceutical e-commerce will improve product accessibility. Future product

development will focus more on precise anti-inflammatory treatment, low irritation, rapid onset of action, long-lasting adhesion, and synergistic effects of anti-inflammation and repair. Gels, sprays, oral films, and compound preparations that combine good safety and ease of use are expected to have significant market potential.

Report Scope

LPI (LP Information)' newest research report, the “Oral Anti-inflammatory Drugs Industry Forecast” looks at past sales and reviews total world Oral Anti-inflammatory Drugs sales in 2025, providing a comprehensive analysis by region and market sector of projected Oral Anti-inflammatory Drugs sales for 2026 through 2032. With Oral Anti-inflammatory Drugs sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Oral Anti-inflammatory Drugs industry.

This Insight Report provides a comprehensive analysis of the global Oral Anti-inflammatory Drugs landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyses the strategies of leading global companies with a focus on Oral Anti-inflammatory Drugs portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms’ unique position in an accelerating global Oral Anti-inflammatory Drugs market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Oral Anti-inflammatory Drugs and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Oral Anti-inflammatory Drugs.

This report presents a comprehensive overview, market shares, and growth opportunities of Oral Anti-inflammatory Drugs market by product type, application, key players and key regions and countries.
