## Abstracts

The global Oral Factor Xa Inhibitors market size is predicted to grow from US\$ 23480 million in 2025 to US\$ 35570 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Oral Factor Xa inhibitors are a class of anticoagulant medications that prevent blood clot formation by directly blocking Factor Xa, an enzyme crucial to the clotting process. Taken orally, these drugs are used to manage and prevent conditions such as deep vein thrombosis (DVT), pulmonary embolism (PE), and atrial fibrillation (AF). Key examples include rivaroxaban, apixaban, and edoxaban.

The market for oral Factor Xa inhibitors has been expanding due to their advantages over traditional anticoagulants. Drugs such as rivaroxaban, apixaban, and edoxaban are increasingly favored for their ease of use, fixed dosing, and reduced need for monitoring, leading to their widespread adoption for managing conditions like deep vein thrombosis (DVT), pulmonary embolism (PE), and atrial fibrillation (AF).

Innovation and competition are driving the market, with pharmaceutical companies focusing on developing new formulations and extended-release versions. These advancements aim to enhance efficacy, safety profiles, and patient convenience. The growing range of options is contributing to a more dynamic market, offering healthcare providers more choices for anticoagulant therapy.

Despite the growth, the market faces challenges such as high costs and the introduction of alternative therapies. Regulatory changes and evolving treatment guidelines can also impact market trends. However, ongoing research and development are likely to sustain market momentum, as new drug options and improved formulations continue to

emerge.
