Oral Paclitaxel is a paclitaxel formulation enabled by novel delivery technologies (e.g., P-glycoprotein inhibitors) for oral administration in breast cancer, lung cancer, and other malignancies, aiming to improve dosing convenience and patient adherence. The upstream supply chain includes advanced excipients (e.g., solubilizers, absorption enhancers), patented technology licensing, and API production. The midstream sector involves complex formulation development, oral solution or capsule manufacturing, and bioequivalence studies. Downstream distribution occurs through DTP pharmacies, oncology specialty pharmacies, and hospital pharmacies. The supply chain must overcome technological barriers, ensure formulation stability, and establish patient education systems.
