The global Oral Restorative Membranes and Bone Graft Materials market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Oral restorative membranes and bone graft materials are two representative types of dental restoration materials, primarily used for bone grafting when the alveolar bone conditions are insufficient during dental implant procedures. Bone graft materials are used for filling and repairing defects or insufficient bone volume in the jawbone, while oral restorative membranes are used for repairing superficial soft tissue defects in the oral cavity. The use of oral restorative membranes can effectively enhance the retention and stability of dental implants.
